

BRITISH SAFETY SERVICES

The IOSH Managing Safely in Construction Certificate

Target Audience

This course is designed for a wide variety of managers (ie clients, project/contracts site managers, agents, designers etc) involved in construction, maintenance and allied industries who want a globally recognised health and safety qualification that provides the candidate with a high level of knowledge and competence in relation to health and safety management on site.

Course Aims

This five day intensive course is a specialist IOSH accredited course and covers all the fundamentals of safety management within the construction sector. An exam and project is part of the structure of the course and successful candidates receive an IOSH Certificate.

Course Objectives

Upon completion of this course, candidates will be able to:

- * Understand the main legal requirements in relation to the construction industry
- * Distinguish between the duties & responsibilities of the employer & employee, client, contractor & sub contractor
- * Assess the competence of contractors & sub-contractors
- * Recognise and know how to manage common hazards on construction sites
- * Undertake risk assessment & risk control in relation to site activities
- * Investigate accidents and incidents and take remedial action
- * Know the importance of continuous active monitoring and be able to prepare and use inspection checklists

Syllabus

The course comprises seven core modules:

- * Principles of accident prevention

- * Health & safety legislation
- * Health and safety management systems
- * Practical risk assessment – techniques and control
- * Management of common site hazards
- * Accident causation and investigation
- * Active monitoring, audit and review
